Subject: Dubrovnik Airport Project

Statement:

The delivered and installed NOV Bondstrand Series 2416C piping system for the jet fuel system of the Dubrovnik Airport Project is suitable for use with flammable liquids such as Jet A-1, gasoline, and diesel fuel.

The NOV Bondstrand series 2416C is designed to dissipate any buildup of static electricity.

The system has been designed to withstand all stresses occurring during its 20-year design life in accordance with the requirements of ISO 14692.
No microcracking or failures of pipe or fittings will occur provided that the system is operated within the parameters specified in the project specification.

Yours Sincerely,

Jeroen van Brakel | *Director of Engineering and Applications*
